

Fuel Lines Age Out

Recently there have been several instances of fuel lines seriously degrading and leaking on older Rush SR models. As a result of this, we are recommending all dealers and customers replace fuel lines that are older than 2 years of age. Given the basic technical requirements and our projected production timeline, we recommend dealers source hoses locally for a more timely remedy. If you are having difficulty sourcing lines, please reach out to Rush and we can assist you in getting replacements.

The hose we recommend should be made with 6AN PTFE lined hose. Below are reference lengths for the fuel lines. Depending on the age of the car and fuel lines used, some fuel lines will have straight AN fitting on then, while others will have some lines with angled fittings. Reference lines being replaced with required hose ends.

Part Number	Name	Length
44400	Tank to pump	12"
44500	Filter to regulator	25"
44600	Regulator to tank return	15"
44700	Regulator to fuel rail	15.5"
44800	Tank to vent	52"
